

ECHOVANTAGE RELEASE NOTES

VERSION 2.09.00

NEW FEATURES

Emergency Access (Break the Glass)

When a user has a Client Filter configured, the user sees an "Emergency Access" button in the upper-right of the Clients screen.

Users can search for a client not in their configured Client Filter.

A Reason must be logged to gain access.

Access to that client is granted for the rest of the current calendar day. (Until 11:59pm)

DrFirst/Medications

This functionality is in a demo-able state, but not ready for production. Client data is being sent to DrFirst, Medications are coming back in EV, and users may click "EPRESCRIBE" to access Rcopia. In the next sprint, we will be making changes to the Medications form to properly capture all DrFirst data.

Staff Contrasts

A new Staff Contrasts card compares percentage of caseloads where the clients are 65 or older.

Categories were added to the Staff Contrasts page.

Logging

Application logging is now happening in Graylog.

Audit Views

Users may now configure which screens should be audited for views. The Auditing itself will be in a future sprint.

Sign button

A new "Signable" flag in FormDesignEHR determines which forms can be signed. When the signable flag in dbo.Forms = 'Y', a Sign button displays on the form. The button is there on forms accessed from the Timeline, or forms used as progress notes.

Future sprints will allow for the signing of the forms.

UPDATES

Ticket #	Description
3705	Feature Flags were removed for several features now deemed released and complete.

BUG FIXES

Ticket #	Description
3617	Alerts are now reflected the correct Alert category.
