

# APPOINTMENT REMINDERS RELEASE NOTES

VERSION 2.1.1

## UPDATES

### Enhanced Error Logs

The Logs screen will now show an entry for reminder errors that were the result of an internal failure such as when the application is not able to communicate with the API. These errors now show as:

### Scheduled Reminder Client List is Paginated

The client list has been paginated on the Scheduled Reminder tab to increase performance and responsiveness.

- A limited number of clients load for the initial view but any client may be located by typing a full or partial search.
- This will search any part of the first name, last name, or client code and populate the drop-down listing with the matching results.

## UPDATES

Ticket #	Description
39	Client Drop-down lists should be paginated.
54	The logs screen now shows an entry for reminder errors that were the result of an internal failure.

## BUG FIXES

Ticket #	Description
42	Drop-down lists are now screen-responsive so they do not extend beyond the modal.
43	A Foreign Key was added to the two core SMS tables to prevent saving a reminder with an invalid communication type.
49	The client selection now persists when a Scheduled Reminder is edited.
