

SMS APPOINTMENT REMINDERS RELEASE NOTES

VERSION 2.3

NEW FEATURES

Idle Activity and Session Time Out Messages

There is now an Idle Activity warning message that displays five minutes prior to a session timeout. After 30 minutes of idle activity, the Session Timeout message displays and the application returns to the login screen. The idle timer does not start while the user is actively using in the application.

Addition of Health Check Endpoint

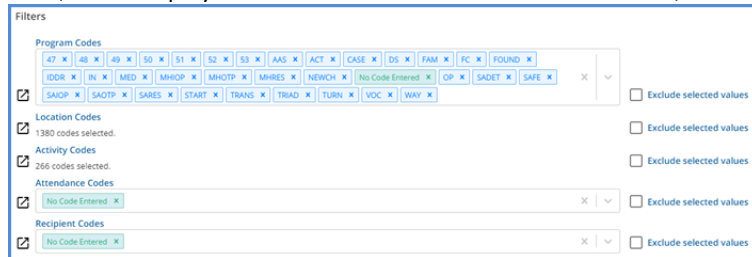

A health check endpoint has been added to provide additional resources when diagnosing connectivity issues. The endpoint can be accessed via **http://host:port/actuator/health** where host and port are the URL and port number used to access the SMS application. The endpoint currently returns an *UP* or *DOWN* status of the Echo Messenger API connection and the database connection.

```
{
  "status": "UP",
  "details": {
    "apiHealthCheck": {
      "status": "UP",
      "details": {
        "EchoMessenger": "API Online"
      }
    },
    "dbHealthCheck": {
      "status": "UP",
      "details": {
        "DB Connectivity": "Connection Established"
      }
    }
  }
}
```

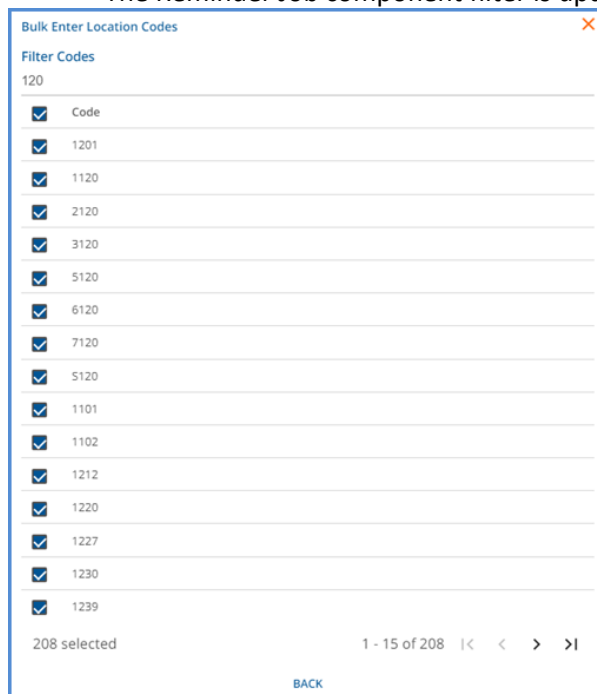

Bulk Entry Option for Component Values

A bulk entry option is now available when entering component code values and is accessed via the bulk entry icon . Component code lists with more than 100 codes default to this input method. When more than 50 codes have been selected for a Reminder Job filter, it will display the count rather than the individual codes, even if bulk entry was not required.

When the bulk entry icon is selected:

- Component codes are displayed in a paginated list
- A count of the selected codes displays
- Individual codes can be selected or deselected by marking the checkbox
- A select all/deselect all checkbox is located at the top of each page (to the left of **Code**)
- **Filter Codes** refines the list of codes displayed in the bulk entry screen
 - This returns full or partial matches to the filter criteria entered
 - The select all feature can be used to select all filter results returned
- The Reminder Job component filter is updated as the codes are selected/deselected

BUG FIXES

Ticket #	Description
APTR-85	The Reminder title field for both Appointment and Scheduled reminders has been validated to restrict input to 100 characters or less.
APTR-88	A scroll bar was added to the Reminder job Add/Edit modals to better accommodate jobs with large numbers of component values.
