

# ECHOVANTAGE RELEASE NOTES

VERSION 3.29-HOTFIX1

## BUG FIXES

### Service Entry Default Diagnosis

An issue was reported where the Service Entry screen no longer defaulted to the selected Client's first, billable, primary, and active diagnosis after disabling the *Filter Client Diagnosis Options* in *Configuration > Service Entry > Diagnosis Options*. If the Client did not have a Program Enrollment specified, then there was no default Client Diagnosis value. This issue was addressed and the following default diagnosis criteria

- If there is only one active, billable, and primary diagnosis as of the Service Date, it is displayed in the Client Diagnosis drop-down.
- If the Client has multiple active, billable, and primary diagnoses as of the Service Date, the first one (earliest Start Date) is returned in the Client Diagnosis drop-down.
- A change to the Date or Client on the Service Entry screen clears all Diagnosis information, Client and Other, and repopulates the Client Diagnosis based on the newly selected Date and Client combination.
- When in edit mode, the following warning displays when the *Date* or *Client* is changed *"Date or Client has changed. Please verify that the Service, Diagnoses, and Progress Note are correct."*

## BUG FIXES

Ticket #	Case #	Description
EV-1868	6546	The default Client Diagnosis now populates in Service Entry for Clients without a Program Enrollment.
