

ECHOVANTAGE RELEASE NOTES

VERSION 3.34 HOTFIX 1

BUG FIX

Lab Processing Stopped Due to Unexpected Error, EV-3294

An issue was reported where the *Process/Insert Result* portion of lab processing stopped when encountering an unexpected error. When the processing stopped, any lab result files after the error remained unprocessed. The issue was resolved by having the job processor (oak) mark results that returned an unexpected error as an *ERROR* when processing and inserting results. This change allows the processing to move on to the next result without stopping.
